

ABSTRACT OF THE DISCLOSURE

A shoulder supported percussion musical instrument carrier and vibration isolation support assembly providing support for a plurality of percussion musical instruments on a person while standing, walking, or marching. Each of the percussion musical instruments is detachably secured between upper and lower plates of an instrument support frame utilizing one or more tension element casings located about the circumference of each instrument. The instrument support frame, in turn, is secured to a supporting vest including vibration isolated shoulder straps. A special bushing is used in conjunction with the tension lugs of the percussion instrument to reduce friction coefficient and to maintain the alignment of the tension lugs.
